

Subsidiaries' Behavioural Responses to Volatile Local Contexts in Emerging African Markets: Evidence from Nigeria

Akiebe Humphrey Ahworegba, Myropi Garri, Christophe Estay

Abstract

Purpose: We explored subsidiaries' behavioural responses to volatile institutional pressures in the local context of the emerging Nigerian market.

Design/methodology/approach: We built on institutional and contingency theory to analyse previous literature on developed markets and apply it to African contexts. We used a context-specific *volatile local context model* to show how porous formal and strong informal institutions constitute international business (IB) as a contested terrain in the host country. We used a qualitative methodology, involving multiple actors, to investigate this phenomenon in practice.

Findings: The findings indicated different types of institutional pressures shaping volatile local contexts, which together or separately impact subsidiaries, depending on their degree of exposure. Subsidiaries behaviourally respond to cope with these pressures through inclusive negotiations involving their home and host countries' networks.

Originality/value: Previous research has imposed developed markets' norms on emerging African markets, regardless of their volatility. Since subsidiaries' responses to local contexts in emerging African markets are poorly understood, we developed a *volatile local context model*, showing how IB becomes a contested terrain in host countries, and we propose a model that differentiates between informal institutions. We highlight the impact of contextual pressures on subsidiaries, according to their levels of exposure to the local context. We conclude that *committed alignment* with a local context is necessary for presenting an effective contingent response to its volatilities.

8 **Introduction**

9

10 Multinational corporations' (MNCs') subsidiaries are challenged by their *local contexts*. A local
11 context is a collection of institutions marking a distinction between domestic and international
12 business (IB) (Meyer *et al.*, 2011). Local contexts vary across countries in their volatility,
13 particularly in underdeveloped regions like Africa (George, 2015; Jackson, 2013; Nkomo, 2011).
14 The African local context is unevenly volatile; it has a differentiated or mixed context, with non-
15 volatile variations positively serving the continent across generations (Meagher, 2007). We
16 explore variations in volatility, highlighting this mixed context.
17
18
19
20
21
22
23
24
25

26 The African local context is volatile because of the strong beliefs arising from the
27 traditional attitudes and local norms shaping its institutional environment (Acemoglu *et al.*, 2014;
28 Alemazung, 2010). This framework promotes unbalanced *local content* regulations across the
29 continent (Ayentimi *et al.*, 2016). MNCs' subsidiaries in developed markets are not immune to
30 institutional conflict (Edwards *et al.*, 2002), but those in emerging African markets are confronted
31 by both *porous formal institutions* at the national level that engage in self-seeking manipulation
32 and strong informal institutions, based on local ideologies, that are characterised by rigid traditions
33 and ethnic nationalist control groups (Meouloud *et al.*, 2019; Yaprak and Karademir, 2011). These
34 types of institutions foster antisocial environments. African informal institutions impose standards
35 on formal institutions, making the latter a hybrid of the former. Institutional contexts normally
36 incorporate extant laws and societal norms (Hillman and Wan, 2005), compelling subsidiaries to
37 adjust their headquarters' policies through *re-contextualisation* (i.e. harmonisation of contexts)
38 (Gertsen and Zølner, 2012; Mu *et al.*, 2007). Re-contextualisation in IB is driven by 'mainstream'

58
59
60

1
2
3 frameworks such as those based on contingency and institutional theory, but such frameworks
4
5 should be context-specific if they are to accurately measure local contexts' volatile variations,
6
7 epitomised by emerging countries such as Nigeria (Plakoyiannaki *et al.*, 2017).
8
9

10 Few studies have explored the volatile variations of local contexts in emerging African
11
12 markets. 'Mainstream' research tends to impose norms on these markets (Child and Marinova,
13
14 2014; Edwards *et al.*, 2010; Jackson, 2013), resulting in 'structural misfit' (Garri *et al.*, 2020) and
15
16 overlooking local characteristics (Eweje, 2009; George, 2015). Research is required to understand
17
18 how subsidiaries align with their local contexts (George, 2015; Jackson, 2013; Nkomo, 2011). IB
19
20 in Africa is challenged by persistently weak institutions, political volatility, and ethnic diversity
21
22 (Meouloud *et al.*, 2019), including institutional conflicts generated by local chiefs and elites
23
24 (Acemoglu *et al.*, 2014). IB research focusing on how subsidiaries respond to volatile local context
25
26 pressures is scarce in African countries such as Nigeria, despite the phenomenal growth of African
27
28 markets (Enweremadu, 2013; George, 2015). Nigeria is both multicultural and multilingual
29
30 (Enweremadu, 2013; George, 2015), as well as being the most populous country in Africa, with
31
32 global economic and political importance (The Guardian, 2014; World Bank, 2018).
33
34
35
36
37

38 Nigeria is known for strong informal institutions that promote corruption and elitism,
39
40 creating institutional gaps and porosity in the country's formal institutions (Areneke and Kimani,
41
42 2019; Ekanem *et al.*, 2019). Such porous national institutions have led to Nigeria's political and
43
44 economic volatility (Ezedike, 2013; Omokaro-Romanus *et al.*, 2018; Udofia, 1984). Strong, often
45
46 volatile, informal institutions pervade the Nigerian business environment, which business
47
48 organisations, government officials, and individuals alike exploit (Rexler, 2010; Wheeler *et al.*,
49
50 2002). This results in cultural complications, ethnic nationalist control groups, regional instability,
51
52
53
54
55
56
57
58
59
60

1
2
3 litigation, corruption, state abuse of power, and a weak infrastructure (Enweremadu, 2013;
4
5 Kemedi, 2003; Onimode, 1978).
6
7

8 Previous local context research in Africa has neither focused on the degree of subsidiaries'
9
10 exposure to the local context nor clearly shown how they should identify its volatile variations.
11
12 How subsidiaries in emerging African markets behaviourally respond to cope with the local
13
14 context and its volatile variations is therefore poorly understood. The local context affects
15
16 subsidiaries in Nigeria when they have to align their headquarters' policies with it. Many of them
17
18 struggle to justify budgets for non-market activities and lack understanding of how government
19
20 activities and those of informal institutions affect strategic objectives. Strategic objectives in a
21
22 volatile environment should strictly align with the local context, but MNCs in Nigeria leverage
23
24 their economic strength to exploit regulatory gaps and inherent corruption in the country, often
25
26 using resources in defiance of best ethical practice and/or conspiring with politicians and local
27
28 elites for personal gain. Locals who feel short-changed tend to resist through violent agitation and
29
30 economic sabotage, which has fostered a volatile local context and rendered IB a *contested terrain*
31
32 in Nigeria—a dilemma that this paper addresses. We define a contested terrain in IB as local people
33
34 or host communities and multinationals competing for dominance of the operating environment,
35
36 with the former resisting the influence of the latter using both social and antisocial means,
37
38 including negotiation, litigation, and the physical disruption of operations. Cultural and
39
40 behavioural differences between MNCs and locals are thus responsible for IB being contested.
41
42
43
44
45

46 To address the dilemma posed by the volatile local context in Nigeria, this research
47
48 considered its causal factors across MNCs, government, and the local people, based on the
49
50 following research question:
51
52
53
54
55
56
57
58
59
60

1
2
3 *How do the subsidiaries of foreign MNCs operate in a context characterised by*
4 *strong informal beliefs arising from rigid traditions and ethnic nationalist control*
5 *groups?*
6
7
8
9

10 We used mixed methods and context-specific modelling to investigate this question
11 (Plakoyiannaki *et al.*, 2017), building on contingency theory (Lawrence and Lorsch, 1967) and
12 institutional theory (e.g. DiMaggio and Powell, 1991; Kostova and Roth, 2002). Whereas
13 institutional theory describes how organisations are forced to conform to existing norms,
14 institutional theory describes how organisations are forced to conform to existing norms,
15 contingency theory explains how they contingently adapt to institutional norms. We applied this
16 theoretical structure to three cases of MNCs that represented industry leaders interacting with
17 diverse local agents (Eisenhardt, 1989; Sinkovics *et al.*, 2008), drawing on archival data,
18 interviews, and observations. This ensured inclusive yet clear-cut insights into local context
19 volatility in Nigeria (Carney *et al.*, 2016).
20
21
22
23
24
25
26
27
28
29

30 To offer new theoretical and practical insights into the interactions between MNCs, local
31 people, and the government, we developed a *volatile local context model* and a *differentiation of*
32 *informal institutions model*. The first clarifies how headquarters and local institutions position IB
33 as a contested terrain, whereas the second highlights how subsidiaries identify both supportive and
34 non-supportive informal institutions to facilitate their activities. These insights will help
35 researchers and other stakeholders to develop a deeper understanding of the contextual responses
36 of subsidiaries to institutional pressures. We expand current knowledge to help minimise the socio-
37 economic unrest confronting subsidiaries in emerging African markets. Such knowledge is
38 essential for MNCs engaging with local institutions and for local institutions aiming to strengthen
39 their capabilities for interaction with MNCs. The study offers a new understanding of how

3 subsidiaries' strategic objectives are affected by government and informal institutional spaces to
4 help subsidiaries formulate effective responses to volatile local contexts.
5
6

7
8 The rest of this paper is organised as follows: First, we present the theoretical understanding
9 of local contexts, drawing on developed markets' contingency and institutional theory. We then
10 analyse emerging markets and propose a volatile local context model (based on a weak institutional
11 context) and a differentiation of informal institutions model, both of which underpinned the
12 research. Thereafter, we explain the research methodology and present case MNCs, together with
13 an analysis of the findings. Finally, we discuss implications, future research, and conclusions.

24 **Theoretical Understanding of Local Contexts**

25
26 Previous research has shown that MNCs' subsidiaries operate in alien environments, characterised
27 by different institutional norms. Subsidiaries are forced to conform to foreign institutional norms
28 and follow local context rules, contingently balancing headquarters' governance policies and those
29 of host countries (Meyer *et al.*, 2011; Schweizer, 2010). Put differently, subsidiaries face
30 simultaneous pressures from non-market factors in the host country and MNC headquarters'
31 demands for alignment. Pressures vary according to the corporate governance style, directly
32 affecting subsidiaries' performance (Garri *et al.*, 2020). These pressures interact at a meeting point
33 in the local context (Meyer *et al.*, 2011), constituting institutional duality (ID) (Ahworegba *et al.*,
34 2020; Hillman and Wan, 2005; Kostova and Roth, 2002; Tempel *et al.*, 2006).
35
36
37
38
39
40
41
42
43
44
45

46
47 ID refers to the simultaneous pressures on MNCs' subsidiaries from both their host
48 environments and their headquarters (Ahworegba *et al.*, 2020; Hillman and Wan, 2005; Kostova
49 and Roth, 2002; Pant and Ramachandran, 2017). Subsidiaries conform with institutional rules by
50 adapting to their external environment (Child and Marinova, 2014; Yang *et al.*, 2012), contingently
51
52
53
54
55
56
57
58
59
60

1
2
3 responding to host-country institutional pressures (Ahworegba *et al.*, 2020; Negandhi and
4 Reimann, 1972). These behavioural responses reflect their autonomy levels (Garri *et al.*, 2020),
5 affecting their view and prediction of environmental conditions (Ahworegba *et al.*, 2020).
6
7

8
9
10 Unfortunately, current understanding may not support a context study in Africa because of
11 the presence of volatile (unstable) local context factors stemming from its underdeveloped
12 environment (George, 2015; Nkomo, 2011); therefore, a context-specific model is necessary to
13 measure the degree of context volatility in Africa (Plakoyiannaki *et al.*, 2017).
14
15
16
17
18
19
20

21 ***Subsidiaries and volatile local contexts in Nigeria and Africa***

22 African countries are underdeveloped (George, 2015), which encourages volatile local contexts to
23 flourish (Child and Marinova, 2014; George, 2015) and shapes subsidiaries' behaviour, including
24 cultural distancing from their headquarters (Beddi and Mayrhofer, 2013).
25
26
27
28
29

30
31 One volatile local context indicator is *traditional autocracy*, which is an old-fashioned
32 dictatorial leadership style (Alemazung, 2010; Imoisili, 1978) adopted by chiefs and elites in Sub-
33 Saharan Africa (Acemoglu *et al.*, 2014), causing local business and institutional complications
34 because it is loosely organised (Acemoglu *et al.*, 2014; Jackson, 2013). The autocracy of African
35 leaders makes the continent's local context volatile due to rigid but unstable governance practices
36
37
38
39
40
41
42
43
44 (Alemazung, 2010; Imoisili, 1978; Jackson, 2013).

45 In Nigeria, MNCs need to deal with 'agitated groups' (Wheeler *et al.*, 2002) through
46 stakeholder-responsive models of corporate social responsibility (CSR). CSR focusing on
47 employment has a positive effect in reducing local poverty and insecurity (Enweremadu, 2013;
48 George, 2015). Considering trade unions in Nigeria, Zambia, and South Africa, we identified
49 'legitimacy gaps' for MNCs that create ethical dilemmas (Eweje, 2009), but MNCs support *social*
50
51
52

54
55
56
57
58
59
60

1
2
3 *investment schemes*, such as water supply projects, in Nigeria (Nwankwo *et al.*, 2007). Since 1958,
4 MNCs such as Shell, Total, Agip, and Exxon Mobil have contributed to poverty in Nigeria by
5 disregarding the welfare of host communities, but they have implemented CSR programmes in
6 recent years to reduce local unrest, thereby creating ‘global friendships’ (Rexler, 2010). The nature
7 and limits of MNCs’ ‘global friendships’ in Africa are unclear; African countries aim for economic
8 efficiency but are constrained by MNCs’ domineering attitudes (Udofia, 1984). Frynas *et al.*
9 (2000) asserted that the Nigerian government, the populace, and industrial competitors threaten
10 Shell’s operations because of the company’s alleged inappropriate stakeholder engagement.
11 Additionally, many MNCs, including Shell and Rio Tinto, have developed stakeholder
12 partnerships at the corporate level but have not cascaded them to the local level due to the porous,
13 volatile institutional context. Omokaro-Romanus *et al.* (2018) highlighted difficulties in Nigeria’s
14 business environment due to institutional gaps, including weak infrastructure. This volatile local
15 context in Nigeria fosters social unrest, youth dissatisfaction and agitation, litigation, economic
16 sabotage, hostage taking, ethical dilemmas, legitimacy gaps, and inappropriate stakeholder
17 partnerships.

The contest between subsidiaries and the volatile local context in Nigeria

36
37
38
39
40
41
42 MNCs in Nigeria operate in an inherently complex environment because of existing institutional
43 gaps (George, 2015), and they sometimes have forceful tendencies that add further complications
44 (Chukwemeka *et al.*, 2011; Kemedi, 2003; Onimode, 1978; Udofia, 1984). This leads to violent
45 agitation by ethnic groups in Nigeria’s Niger Delta, which argue that oil exploration benefits only
46 Nigeria’s leaders and their ‘neighbourhood’ has been degraded by oil exploration without due
47 compensation (Ezedike, 2013; Wheeler *et al.*, 2002). The World Bank (2014), in a survey of 2,676
48

58
59
60

1
2
3 firms in Nigeria, found that the top 10 identified obstacles due to institutional gaps included
4
5 ‘political instability’, ‘corruption’ and ‘trade regulation’.
6

7
8 MNCs have encouraged the Nigerian government to seize communal lands in their favour
9
10 (Kemedi, 2003), often meaning that oil exploration pollutes adjoining lands, creeks, rivers, and the
11
12 sea upon which the locals depend for living (Kemedi, 2003). Consequently, MNCs face youth
13
14 restiveness, organised crime, and strong welfare demands (Eweje, 2009; Rexler, 2010). MNCs in
15
16 Nigeria are often highly influential, leading to different forms of resistance from the locals. As
17
18 Figure 1 shows, the apparently strong influence of MNCs, supported by Nigeria’s porous, volatile
19
20 institutional environment, makes IB a contested terrain in the country.
21
22
23
24
25

26 ***INSERT FIGURE 1 AROUND HERE***
27
28
29

30
31 Figure 1 indicates the volatile local contextual factors in Nigeria as a typical
32
33 underdeveloped country (George, 2015; Jackson, 2013; Nkomo, 2011). These factors highlight
34
35 how MNCs and local actors react in a manner that renders IB a contested terrain. MNCs and local
36
37 people interact in a strong, porous, and volatile regulatory and informal institutional environment.
38
39 The economic strength of MNCs often drives them to take advantage of porous formal (national)
40
41 institutions and strong informal volatile factors to exploit resources without proper stakeholder
42
43 engagement. This approach allows MNCs to dominate localities, which the locals resist with
44
45 violent agitation, operational sabotage, and frequent litigation. According to the volatile local
46
47 context model, MNCs operating in developed markets are hosted by stable, strong, and mature
48
49 institutional environments (Collinson and Rugman, 2008; Edwards *et al.*, 2010; George, 2015;
50
51 Jackson, 2013), preventing them from wielding excessive influence or exhibiting domineering
52
53 behaviours. By contrast, MNCs operating in emerging markets like Nigeria are hosted by unstable,

Methodology

We used the volatile local context model we developed to structure this qualitative research, which involved multiple actors (Sinkovics *et al.*, 2008). The qualitative approach enabled us to accommodate different paradigms and critics (Plakoyiannaki *et al.*, 2017) and choose cases that would clearly exemplify volatile local context issues in Nigeria (Eisenhardt, 1989; Sinkovics *et al.*, 2008).

We took a multiple case approach based on in-depth analysis of archival data, interviews, and observations to gain empirical insight into the volatile local context pressures confronting subsidiaries (Eisenhardt, 1989; Yin, 2014). This provided a clear and all-inclusive view of the Nigerian local context (Plakoyiannaki *et al.*, 2017).

Case selection process

MNCs' activities in Nigeria span crucial sectors of the economy (Amaeshi and Amao, 2009; Onimode, 1978). We chose three cases of actors that represented the oil and gas (Royal Dutch Shell Plc), communication (MTN Group Limited), and banking industries (Standard Chartered Bank (SCB)) and had direct contact with locals. Shell is the leader in the global oil and gas industry, MTN has the largest market share in the GSM industry in Nigeria, and SCB is a leading global bank. With a cumulative history of 150 years in Nigeria, they have rich experience of the adverse and turbulent local environment. Consequently, they provided an excellent platform for analysing the volatility of Nigeria's local context.

Data collection

We gathered data from multiple sources of relevant evidence to ensure that data collection proceeds logically and sequentially (Sinkovics *et al.*, 2008; Yin, 2014). We used personal networks to identify suitable interviewees and to foster trust in the research. We conducted three face-to-face semi-structured interviews and relied on 14 phone calls when it was not possible to meet in person. We used a semi-structured approach to ensure the free flow of explanations and to avoid saturation and nervousness (Eisenhardt, 1989; Yin, 2014). The interviews took place in Nigeria between 2014 and 2018. All interviews were conducted in English and lasted between 20 and 30 minutes. We obtained secondary data from company documents, company websites, annual reports, government institutions' reports and statistics, the public domain, and the World Bank. Table II provides details of the primary and secondary sources of information used to obtain qualitative data for the three cases.

INSERT TABLE II AROUND HERE

Data analysis

We used thematic analysis (Braun and Clarke, 2006) because of its recognised trustworthiness for qualitative research (Eisenhardt, 1989), analysing our data through text organisation, coding, modelling, and interpretation (Sinkovics *et al.*, 2008). This helped us to collate relevant sections, content, themes, and concepts in a refined way (Braun and Clarke, 2006). The findings are based on the interviews, observations, and all other secondary data used (Yin, 2014).

13

14
15 *Case 1: Royal Dutch Shell Plc. (oil and gas industry)*
16

17 Shell is a British–Dutch oil & gas company operating in over 70 countries, with a presence in
18 Nigeria since 1937. It has four subsidiaries in Nigeria, of which Shell Nigeria is the largest, with
19 the largest local footprint of all international oil and gas companies. The company was a pioneer
20 in onshore, shallow-, and deep-water exploration and production and is currently involved in a
21 joint venture with the Nigerian National Petroleum Corporation (NNPC), Total, and Agip. It holds
22 offshore licences for the Bonga field and Nigeria Liquefied Natural Gas (NLNG), exporting LNG
23 worldwide. Shell Nigeria employs 4,000 people and has contributed to the development of tens of
24 thousands of jobs, directly or indirectly.

3 *Case 3: Standard Chartered Bank-SCB (banking industry)*
4

5 SCB is a British multinational bank operating in over 70 countries. In 1965, it acquired a Nigerian
6 Bank established in 1894. The end of Nigeria's civil war in 1970 catalysed major economic
7 recovery; hence, SCB's investment in Nigeria was reduced to 38% in 1979. Renamed the First
8 Bank of Nigeria, it divested its shares in 1996 (SCB, 2015) but re-entered Nigeria in 1999. Today,
9 it offers a wide range of products and services and employs over 900 staff. It operates about 40
10 branches in Nigeria (SCB, 2015).

34

35 ***Local context pressures on Shell***

36 Shell faces pressures from institutional crises, including social and civil unrest, disruption by non-
37 governmental and cultural organisations, acts of economic terrorism, maritime piracy, sabotage,
38 the theft of oil and equipment, and the consequent insecurity of employees (Table VI) (Premium
39 Times, 2014, 2018; Shell, 2016; Vanguard, 2018). These local risks have adverse consequences
40 for Shell's earnings (Shell, 2016), exacerbated by contractual obligations and relevant legislation
41 that increase the costs of Shell's operations; for instance, local communities have litigated against
42 Shell regarding various environmental and contractual disputes, and the company has been
43 indicted for violations (FCPA; Financial Times, 2017; Shell, 2016). Violations of anti-bribery and

7
8
9

10 ***Local context pressures on MTN***

11
12 2016 was the worst year for the MTN global group's performance because of the regulatory and
13 socio-cultural challenges it experienced, especially in Nigeria (MTN, 2016, 2017). MTN Nigeria
14 was fined \$5.2 billion (USD) in 2015 by the Nigerian Communications Commission (NCC) for
15 not meeting the deadline for mobile network operators (MNOs) to disconnect inappropriately
16 registered subscriber identification modules (SIMs). This resulted in resignations of its top
17 executives, who were accused of collusion (MTN, 2016, 2017; Reuters, 2016; Vanguard, 2015,
18 2016). Similarly, in 2016, the Central Bank of Nigeria (CBN) instructed banks in Nigeria to
19 suspend the remittance of dividends by MTN because of the alleged illegal repatriation of funds
20 to South Africa, which MTN denied (MTN, 2016, 2017; The Guardian, 2016). Additionally,
21 indigenous people and landowners have demanded operational fees of varying amounts from the
22 company, which risks forced relocation from suitable sites or property destruction if it does not
23 pay (as Table VI indicates).

42 ***Local context pressures on SCB***

43
44 SCB faces both regulatory and sociocultural pressures (Table VI). Local instability, including the
45 civil war that ended in 1970, seriously affected SCB, leading to the forced sale of its shares to
46 indigenous banks. It divested these shares in 1996, but re-entered the market in 1999 (SCB, 2015).
47 In 2012, SCB and other institutions faced pressure to apply the Treasury Single Account (TSA)
48 policy in Nigeria. The TSA is used worldwide because of its benefits for governments, but it eroded

3 SCB's capital base because governments could no longer 'fix-deposit' huge sums of money (SCB,
4 2015). SCB was accused by CBN (Central Bank of Nigeria) of deliberate violation of exchange
5 rate rules and was asked to refund #1.7 billion naira (NGN—Nigerian currency) in excess profits
6 from a Forex sale of \$48.6 million (USD) above the inter-bank exchange rate. However, SCB
7 claims compliance with the rules (Premium Times, 2016).

24
25

26 ***INSERT TABLE VII AROUND HERE***

27
28
29
30
31 *Strategic negotiation responses.* Subsidiaries in Nigeria negotiate with local and international
32 stakeholders and follow existing regulations, filing defences in courts of law when necessary.
33 Shell, for example, abides by international regulations such as the FCPA and AML. Shell had
34 agreed to the Deferred Prosecution Agreement (DPA) imposed by the US Department of Justice
35 following 2010 alleged violations of the FCPA in connection with freight-forwarding 'sharp
36 practices'. The charges were dismissed in 2013 following fulfilment of the DPA terms. Shell
37 received an out-of-court settlement for some oil blocks in Nigeria after an interim order against
38 the company issued by Nigeria's High Court was dismissed on constitutional and procedural
39 grounds. Some Shell interviewees noted:
40
41
42
43
44
45
46
47
48
49
50

51 We face massive challenges from host communities, such as threats of shutting down our
52 facilities, kidnapping of our workers, illegal oil bunkering, and so forth (Shell, Interviewee
53 1). We pay compensation for oil spills, which mostly result from pipeline vandal attacks
54
55
56
57
58
59
60

1
2
3 but still drag us into courts. We maintain harmony by settling disputes out-of-court (Shell,
4 Interviewee 8). The government strictly regulates our industry because it generates the
5 highest revenue for the country. You see, we face enormous problems, both regulatory and
6 non-regulatory (Shell, Interviewee 4).
7
8
9
10

11 MTN negotiated with the governments of Nigeria and South Africa to reduce the 2015 fine of \$5.2
12 billion to \$3.2 billion with the possibility of further reductions and other benefits. The 2016 CBN
13 instruction to various banks in Nigeria to suspend remittance of dividends by MTN to its home
14 country was lifted in 2017 through concerted defence and negotiation. Some MTN interviewees
15 explained:
16
17
18
19
20
21

22
23 We never planned to short-change the government and Nigerians on SIM disconnection
24 issues, which brought about the fine of \$5.2 billion; nor did we really engage in criminal
25 remittance of funds to our home country, but we decided to follow the negotiation path,
26 which paid off substantially by bringing the issues to a logical end. (MTN, Interviewee 1).
27
28
29

30 We cope with host communities and landowners' fees, including demands for compulsory
31 contracts and the employment of certain indigenes (MTN, Interviewees 2 and 3).
32
33
34
35

36 SCB, on being accused of exchange rate violations and imposing cultural pressure, stated:

37
38 We always comply with CBN rules, and our strategy is to negotiate with concerned
39 authorities to settle regulatory misunderstandings in a friendly manner (SCB, Interviewee
40 2). We similarly satisfy our immediate host environment's employment requests and pay
41 some 'development' fees (SCB, Interviewee 2).
42
43
44
45
46
47
48

49 *Social investment responses.* Social investment is a key means of managing local context pressure
50 in Nigeria due to the poverty of the locals. MNCs see that poverty leads to hunger, poor education,
51 and health-system failure, which create volatile local environments. MNCs' subsidiaries contribute
52 to local communities through initiatives that link their core activities with the issues these
53
54
55
56
57
58
59
60

1
2
3 communities face (Garri, 2021). Shell, MTN, and SCB have at various times initiated social
4 investment programmes, including community enterprise development, education, and health
5 solutions (Garri, 2021); for example, Shell (2016) claimed that Nigeria has the largest
6 concentration of social investment in its parent's company, with \$93.6 million (USD) contributed
7 to Nigeria's Niger Delta Development Commission (NDDC) in 2014. Shell, MTN, and SCB
8 variously claimed:
9

10
11
12 We have been at the forefront of supporting the Nigerian government in meeting its
13 citizens' living condition needs. We set aside funds and allocate special budgets for
14 community-based projects as a way of creating global friendships with host communities,
15 thereby avoiding disputes and litigation. Community leaders and government officials
16 attend our events as special guests. This is one of the best ways of reducing instability in
17 our operating neighbourhoods (Shell, Interviewees 2 and 5; MTN, Interviewees 3 and 4;
18 SCB, Interviewee 3).
19
20
21
22
23
24
25
26
27
28
29
30
31
32
33

34 *Portfolio assessment responses.* MNCs under review claim to execute regular portfolio
35 assessments of Nigeria's economic growth and integration in terms of domestic and international
36 benefits. According to interviewees:
37
38
39

40
41 We closely follow government policies and contribute to Nigeria's global competitiveness,
42 and not just through tax revenue generation; we make sure our internal policies support the
43 functionality of Nigerian projects. This process has given us closer ties with Nigeria and
44 its people (Table VII) (Shell, Interviewee 4; MTN, Interview 4).
45
46
47
48
49
50
51

52 *Divestment responses.* In rare instances, MNCs in Nigeria have divested all or part of their
53 investments as a response to volatile local context pressures. Until 2016, Shell made local
54
55
56
57
58
59
60

1
2
3 divestments in highly volatile locations because of economic terrorism, including kidnappings,
4 sabotage, and crude oil theft in the Niger Delta. SCB made international divestments by winding
5
6 down its activities in 1996, although it re-invested in Nigeria in 1999.
7
8

9
10 According to a Shell group interviewee:

11
12 We were forced by prolonged hostility from the locals to sell off some of our oil facilities
13
14 in parts of the Niger Delta. Our continuous presence after several failed peace initiatives
15
16 was likely to aggravate the criminality against us, so we partly relocated to a safer
17
18 environment (Shell, Interviewees 2 and 3).
19

20
21 In the case of SCB:

22
23 We maintained unstable operations in Nigeria because of regulatory challenges
24
25 until recently. We now strategise better, regarding external pressure management
26
27 (SCB, Interviewee 1).
28
29
30
31

32 *Learning and adaptation responses.* MNCs use cultural integration or diffusion to adapt their
33
34 activities (Garri, 2021); however, learning the local culture in Nigeria is challenging due to the
35
36 diversity of cultures, which explains the constant disagreements between MNCs and their host
37
38 local communities:
39

40
41 We encourage local adaptation to solve environmental problems. We have a high number
42
43 of indigenous employees who lead our process of learning how ‘things’ are done locally.
44
45 This process has helped in dealing with certain issues of local importance, thus enabling
46
47 us not to be trapped by avoidable environmental pressures from both the government and
48
49 local communities (Table VII) (Shell, Interviewee 6; MTN, Interviewee 6).

Implications and Discussion

This study advances insights into IB regarding the Nigerian local context by focusing on its status as an emerging African market. It does so by showing how subsidiaries behaviourally respond to or cope with volatile institutional pressures arising from the local context (Table IV; VI; VII). We developed context-specific models for Africa and Nigeria: a volatile local context model (Figure 1) and a differentiation of informal institutions model (Table I). The first indicates how a pressurised environment stemming simultaneously from porous national/strong informal institutional contexts and MNC headquarters makes IB a contested terrain in the host country. The second identifies positive and non-positive institutional norms in the host country, allowing MNCs and other stakeholders to harness their benefits; it highlights MNC strategies for institutional conformity and contingent adaptation processes to accelerate harmony with the host environment. These theoretical insights can help subsidiaries and other stakeholders to respond ‘contingently’ or ‘contextually’ to volatile and non-volatile institutional pressures in their host locations.

Empirically, we have shown the relative impact of volatile local context pressures on subsidiaries across contexts and how subsidiaries differ or vary in their exposure; for example, we have identified contexts with similar backgrounds, including the protocols of host governments (porous national institutions) and host communities (rigid cultures and ethnic nationalist control groups), as well as specific varying contexts (i.e. regional instability, litigation, and regulatory disputes; see Table VI). We have explained how similar, specific contexts shape subsidiaries’ behavioural responses in their host countries (Table IV; VI). These findings constitute a new understanding of how formal and informal institutional spaces connect with subsidiaries’ strategic objectives, helping subsidiaries to effectively manage institutional pressures arising from volatile local contexts in their host countries.

1
2
3 Previous research in emerging African markets has not focused on local contexts or clearly
4 explored how subsidiaries identify volatile local context factors for easy management. Scholars
5 generally argue that emerging African markets' are turbulent and make business activities difficult,
6 without necessarily detailing their nature or suggesting management approaches (Areneke and
7 Kimani, 2019; Child and Marinova, 2014; Ekanem *et al.*, 2019; George, 2015; Ibeh *et al.*, 2012;
8 Jackson, 2013; Meouloud *et al.*, 2019; Omokaro-Romanus *et al.*, 2018). We have clearly identified
9 volatile local context pressures in Nigeria and shown how MNC subsidiaries interact with local
10 institutions to manage them. Subsidiaries in Nigeria behaviourally respond to formal and informal
11 (regulatory and non-regulatory) pressures by networking effectively across regional and
12 international governments, as well as local stakeholders. Shell, for example, settles cases brought
13 against it by local people in both domestic and foreign courts of law by providing compensation
14 payments, including 'unjustified' ones. MNC subsidiaries generally respond to variations in
15 pressures through negotiation and the provision of social investment programmes for locals,
16 helping the Nigerian government to harness its economic potential and local knowledge. These
17 insights are important for MNCs, governments, local institutions, and policymakers that seek to
18 create sustainable global friendships.

19
20 We acknowledge the heterogeneous contexts of African informal institutions. While there
21 are many negative aspects, such as corruption and elitism, there are also many positive aspects,
22 including cohesive institutional traditions; kingship/kingdoms; sociocultural groups that
23 emphasise human dignity, rights, and responsibilities; community leaders who forge
24 memorandums of understanding (MOUs) with MNCs; traditional policing and security systems;
25 and indigenous socio-economic groups that promote self-reliance. These informal institutions have
26 positively served Nigeria and other African countries, as well as MNCs, for generations.

60

Clearly, our five propositional statements were supported by our findings. We have shown that MNCs' subsidiaries in Nigeria operate in a context characterised by strong informal institutions, rigid traditional attitudes, and ethnic nationalist control groups. We have also shown that subsidiaries experience both supportive and non-supportive informal institutions in African markets like Nigeria, and they succeed by differentiating between institutions; offering contingent responses to institutional beliefs through negotiation, learning, and adaptation; and implementing social investment schemes to build a sustainable society. The evidence clearly indicates that supportive, positive informal institutions in the Nigerian environment have served local people and MNCs across generations in building a sustainable environment. Subsidiaries leverage these supportive informal institutions to succeed in volatile and non-supportive contexts.

Future research perspectives

Future research should deeply explore mixed, heterogenous, or differentiated informal institutions in Nigeria or Africa to clearly show which should be improved or discouraged. Future research could compare Nigeria's local context with huge, resource-rich emerging markets such as China, India, or Russia. Future research could examine how positive and negative informal institutions in Nigeria/Africa differ, or how contexts differ across culturally diverse, naturally endowed host countries. Investigating these issues is of great importance for policymakers in building international relationships.

Conclusion

Committed alignment with the local context is paramount for effective contingent responses to country volatilities. This is important for MNCs operating within emerging African markets because of their porous national institutions and strong traditional beliefs. The presence of porosity and gaps in African institutions, such as those in Nigeria, prompts MNCs' subsidiaries to adopt domineering attitudes, which locals usually resist either through genuine local and international litigation processes or anti-social behaviours such as political and economic terrorism. Such conflict between MNCs and the local context in a porous institutional framework renders IB a contested terrain in Nigeria. Our findings have shown that subsidiaries respond to volatile local contexts by using a combination of their resources and home/host countries' connections to settle disputes. This study offers new theoretical insights by extending knowledge about the frontiers of both developed and emerging markets' institutions. These insights encourage harmonious relationships between MNCs and local stakeholders seeking to engage effectively.

Table IV: Interview flow and key findings

Interviews by Function*	Shell Plc	MTN LTD	SCB Bank	Total
Operations and procurement	(2) (1) There are demands from various groups, including self-seeking ethnic groups or leaders, for compensation for land use and forced employment. We constantly fear that our employees will be kidnapped. We forge ahead via negotiation. (2) Our operations have been sabotaged several times, and we face forced relocations, shutdowns, and kidnapping, although the leadership of Bonny Kingdom has tried to show us how we can develop effective public relations via community projects.	(1) (1) We face regulatory issues. We were accused of short-changing the government and Nigerians on SIM disconnection issues, which brought about a fine of \$5.2 billion; we did not really engage in criminal remittance of funds to our home country. We followed the negotiation path, which paid off substantially by bringing the issues to a logical end.	(1) (1) Because of environment risks and regulatory challenges, we maintained unstable operations in Nigeria. We now strategise better regarding external pressure management.	4
Research and development	(1) (3) We face several issues resulting from rigid local processes. Prolonged hostility from the locals made us sell off some of our oil facilities. Our continuous presence after several failed peace initiatives was likely to aggravate the criminality against us. We relocated to a safer environment.	(1) (2) We face issues from several unauthorised bodies claiming development levies and land access ownership. We settled out of court to reach agreement and progress our project.	(1) (2) There are always environment issues. We comply with regulators. We support the environment through social investment.	3
Corporate/external affairs	(1) (4) We have to pay unnecessary compensation due to traditional attitudes, but they still drag us into courts. We maintain harmony by settling disputes out of court. The government strictly regulates our industry because it generates the highest revenue for the country. We set aside funds and allocate special budgets for community-based projects. We are very supportive of a sustainable environment.	(-)	(-)	1
Environmental management	(1) (5) Massive challenges from the host communities: a very volatile situation, mostly in the creeks, and threats of shutting down our facilities or kidnapping our workers. We built a vocational college with affiliated institutions like City and Guilds London, financed and run by Shell. The indigenes established an employment bureau that checks and ensures that citizens are not marginalised, and ensures that those trained at college have access to Shell internship training and are employable anywhere.	(1) (3) We negotiate with landowners and pay development fees to locals as a government requirement. We support the Nigerian Government in meeting its citizens' living condition needs as a way of creating global friendships with host communities.	(-)	2
Communications and public relations	(1) (6) We face serious obstacles such as rigid traditions and difficult communal laws, youth dissatisfaction, and irregular government policies and monitoring. We use intercultural understanding, learning from the environment and understanding how things are done locally. There are some positive aspects of host communities (i.e. effective and agreeable local leadership).	(1) (4) The country is volatile, but we maintain stability by following government policies and contributing to Nigeria's global competitiveness through tax revenues and by promoting social investment, including health and education.	(1) (3) There are security issues, but we make sure our internal policies support the functionality of Nigerian projects. This process has given us closer ties with Nigeria and its people.	3
Sales and distribution	(1) (7) We face regulatory and non-regulatory problems, especially communal issues that are often turbulent, including forced shutting down of our activities and irregular sales. We count losses when youth is restive.	(1) (5) We have steady sales growth despite regulatory challenges. Local people have not negatively affected our distribution channels.	(-)	2
Production management	(1) (8) We maintain a sustainable environment, but we face attacks, illegal oil bunkering, pipeline vandalism, and courts cases. We compensate for oil spills, which mostly result from pipeline attacks.	(1) (6) We work with the government and local people to ensure local capacity building for the local citizens, to avoid disputes and litigation.	(-)	2
Total number of interviewees	8	6	3	17
