Dear Richard,

I can confirm that you do not require formal R&D governance approval to undertake your analysis of urine samples, on the understanding that 'These will be surplus material from routine diagnostic testing, which may be used without further reference to the Human Tissue Act, and do not require specific consent or ethics approval. Samples will be from patients in treatment for drug addiction who have consented to drug testing as part of their treatment.' Please note that you will require full approval and authorisation to undertake this analysis from the appropriate laboratory personnel.

Kind Regards,

Miss Jamie Peterson

Hi Jamie,

Please see Richard's attached proposal, please can you confirm to him that he does not need R&D approval.

Best wishes

Kirsty Hedditch

Subject: Doctorate project

Kirsty

I have been given your details by Roy Sherwood as the person I need to contact to register my doctoral project with. I have already had a letter that states it does not need ethics approval, as it is a method development project.

Please could you confirm that there is no further action I need to take for the R&D office, and that I can proceed when I have approval within the laboratory.

Many thanks
Richard
